

Faculty of Technology, University of Sri Jayewardenepura
Bachelor of Information and Communication Technology
ITC 2223 Web Application Development
Assignment 2 (Special Repeat)

Create a web-based shopping cart for an online shopping application. This web cart should contain the following features:

1. Display item details (images, description, price, etc.).
2. User can select items and add them into the cart.
3. User can see the items in the cart.
4. User can remove the items from the cart.
5. User can empty the cart by removing all the items at once.

Note:

- You can use any front-end and back-end technology.
- Create a simple database to store the data related to this application. your database generation code must be added as a .sql file in your submission folder
- Web pages should be responsive and attractive.

How to submit:

Create a zipped file with all related files.

Name the zipped file with your index number (e.g. ict17801) and submit using the provided link.

Deadline: **04th August 2022**
